

The art of making vines.

Photo 1/ supplies needed, flora stem wire, 22 gauge wire, flora stem like in photo from dollar store, hot glue, and paint

Photo 2/ cut stem wire to length, 3 @ 2 1/2" & 1 @ 4 1/2"

Photo 3/ position stem wire as shown in photo, 2" apart; I drilled holes in a board to space them and keep them upright using 22 gauge wire, attach the longer piece to the three posts, leaving the ends of the wire long to be used further on

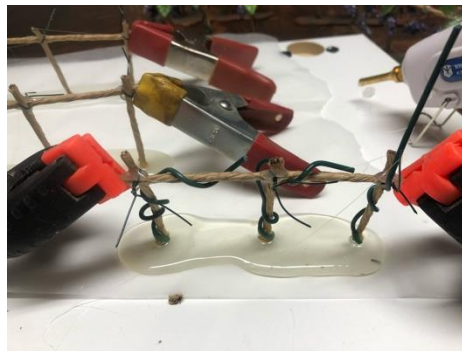

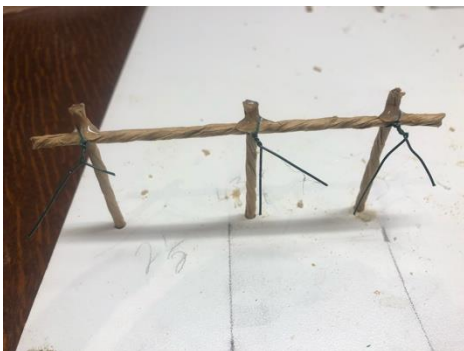

Photo 4/ clamping the assembled vine in clamps as shown, make your base with hot glue and let cool and harden

Photo 5/ using lengths of stem wire, wrap around upright posts and on to crossbar, then wrap the 22 gauge wire left long around crossbar

Photo 6/ snipping off small bunches of the dollar store flora pick, hot glue them to your vines all over the wires

Photo 7/ again go to your flora pick, snip off individual leaves and hot glue them on to the nearly completed

Photo 8/ paint your base and there is your finished vine

Photo 9/ in place at your winery vignettes
